EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Gregory Welte on 2/17/06.

The CLAIMS of the application have been amended as follows:

9 (amended). An igniter for a gas turbine engine, comprising:

- a) a first electrode having a tip;
- b) a second electrode which cooperates with the tip to generate a plasma; and
- c) a third electrode having no exposure to the tip when the igniter is newly installed, but which develops exposure to the tip after a period of operation and generates a plasma between the first and third electrodes.

14 (amended). An igniter for a gas turbine engine, comprising:

- a) a first electrode having a tip;
- b) an insulator surrounding the first electrode;

Art Unit: 3746

- c) a second electrode surrounding the insulator, and having an edge which cooperates with the tip to generate a plasma; and
- d) a third electrode embedded in the insulator, having no part exposed to the first electrode; wherein operation of the igniter causes part of the insulator to erode, thereby causing part of the third electrode to become exposed to the tip and cooperate with the tip to form a plasma.

22 (amended). An igniter for a gas turbine engine, comprising:

- a) a first electrode, rod-like in configuration, coaxial with an axis;
- b) an insulator surrounding the first electrode, except at a tip of the first electrode, where said tip is exposed;
- c) a second electrode, generally cylindrical in configuration, coaxial with said axis, and surrounding the insulator and the first electrode;
- d) a third electrode having a distal end, embedded in the insulator and completely surrounded by the insulator; wherein operation of the igniter causes part of the insulator to erode, thereby causing part of the third electrode to become exposed to the tip and cooperate with the tip to form a plasma.

Claims 15 and 23 have been canceled.

Drawings

The following changes to the drawings have been approved by the examiner and agreed upon by applicant: Figures 2-6 would be labeled as prior art (see page 5 of the specification). In order to avoid abandonment of the application, applicant must make these above agreed upon drawing changes.

REASONS FOR ALLOWANCE

2. The following is an examiner's statement of reasons for allowance: the prior art of record do not fairly teach in permissible combination the last [with its own paragraph letter] paragraph of each of the independent claims. It was agreed that making the above changes distinguishes over the art of record. Note that Kumagai et al do not teach the 1st electrode and the embedded electrode 57 will create a plasma together.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
